EXAMINER WAKS;

As per our conversation, there are many places in the originally filed specification that deal with extracting excessive heat that goes into ambient/atmosphere. For example:

Page 39, lines 8-19, can use "additional cooling to ambient." from absorber "water sprayed..."

Page 43, lines 15-25, "additional heat exchangers...to extract heat..."

Page 44, lines 6-15.

Page 48, lines 4-10.

Page 49, lines 8-14, "...additional heat exchangers can be added to extract heat..."

Page 14, lines 12-20, "Heat dissipating units....."

I believe there are other examples, that we can point out as well. Please let us know if you need additional info.

Thanks again for your time;

Brian S. Steinberger
